

Natural Acid Descaler

BioScale

BioScale is a natural cleaning product that combines eco-friendly plant derived surfactants with natural fermentation to produce an effective descaler for all types of toilet and urinal areas.

The Problem

In all types of urinal and toilet areas, traditional toxic, highly caustic or corrosive chemicals, such as mineral acids have been used to remove and treat heavy scaling.

No matter how much is applied, primarily within the urinal, the scale continues to exist and that bad smell always seems to linger.

Moreover, the scale build-up is not limited to just the urinal, as more often than not, many parts of the general toilet facilities can be affected.

The Product and the Solution

BioScale is a specialised concentrate that is highly effective at removing organic or inorganic scale.

As the product is naturally derived, it completely eliminates the need to use harmful toxic chemicals.

This complex natural blend within the product effectively eradicates the scale build-up and ensures a trouble free 'green' environment.

BioScale is non-flammable, biodegradable, non-toxic and when used as directed, is completely safe. For best results, store in a cool, dry place.

Health & Safety

BioScale, the "Natural Descaler" should be handled under good house keeping practices. Please wash hands after use and in case of contact with eyes, rinse immediately with plenty of water and seek immediate medical advice.

Key product features

- Naturally derived from the environment
- Non-toxic, safe to use
- Ready to use
- Approved to EN1276 & EN13697
- Biodegradable
- Non-flammable
- Brings the shine back to urinals and toilet areas

Usage instructions

BioScale is quick and easy to apply and may be applied at any time. The exact dosage is dependant on the application and should be calculated in order to fully coat the downstream pipework of the system being treated. The product may be dosed via the toilet bowl, urinal or suitable point in the system. However, for surface cleaning of the scale, dilute up to 1 part (BioScale) to 4 parts water. For stubborn spots, use a higher dosage, but for any surface not commonly encountered, test the area prior to use.

It is important to note that BioScale should not be used on marble or for descaling kettles. BioScale is safe to use on marine and land-based toilet systems, gravity or vacuum based and all types of system discharge lines.
